

canvas Dx | Because Knowing is the First Step.

A Smart, Faster, Easier Path Forward

When you have concern, we see a path forward

When you are worried about your child's development, every moment counts

The early childhood years are a window of opportunity to positively shape your child's development and future.

In the first years of life, more than 1 million new neural connections are formed & shaped every second. Early childhood marks one of the most rapid periods of growth and development for the human brain.

Early identification & diagnosis of developmental delay, including conditions such as autism, and subsequent early interventions, support life-changing improved outcomes for children and their families. But it can take many appointments with clinicians and long wait times to receive a diagnosis.

With Canvas Dx, you and your doctor are at the center of a faster, easier way forward, together

From a simple app in the comfort of your own home, you will:

Answer a few, short, multiple choice questions about your child

Record and upload two short videos of your child's natural behavior

Your doctor will also answer questions about your child's behavior and development

+

+

Canvas Dx puts all this information together and produces a result your doctor will use to inform potential diagnoses or rule out autism to better plan next steps for your child.

Canvas Dx uses smart AI-technology based on data from thousands of diverse children at risk for and with developmental delay including autism.

Canvas Dx is a simple, efficient first step you and your doctor can take when you have developmental concerns about your child

- Canvas Dx gives you and your doctor the opportunity to *know more sooner, so you can act earlier*
- Canvas Dx is the first FDA authorized technology that helps your doctor diagnose or rule out autism in children between the ages of 18 and 72 months
- Canvas Dx can help shorten the time to diagnosis – from months or even years, to days

“

Canvas Dx was a miracle for our family because we could act right away. Other families I know had to go from doctor to doctor to get to the bottom of their concerns, and it took forever. **I'm so grateful our pediatrician knew about Canvas Dx.** Our child is progressing well today because of Canvas Dx.

– Mother of now 4-year-old child

Know more sooner, so you can act earlier.

Cognoa is a pediatric behavioral health company developing AI-based diagnostic and therapeutic products to enable early and equitable diagnosis and care for children living with developmental and behavioral health conditions.

Canvas Dx Indication for Use

Canvas Dx is intended for use by healthcare providers as an aid in the diagnosis of autism spectrum disorder (ASD) for patients ages 18 months through 72 months who are at risk for developmental delay based on concerns of a parent, caregiver, or healthcare provider. The device is not intended for use as a stand-alone diagnostic device but as an adjunct to the diagnostic process. The device is for prescription use only. For full indications for use, precautions, warnings, and contraindications, visit www.cognoa.com/ifu.
